Dear valued STN customer,

In an effort to enhance your experience with STN, we would like to better understand what you find useful. Please take approximately 5 minutes to complete a web survey.

If you provide us with your name, login ID, and e-mail address, you will be entered in a drawing to win a free iPod(R). Your responses will be kept confidential and will help us make future improvements to STN.

Take survey: <http://www.zoomerang.com/survey.zgi?p=WEB2259HNKWTUW>

Thank you in advance for your participation.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

AB Disclosed are adhesive coating compositions containing a metal peroxide for producing clear colorless adhesive coatings on substrates, particularly micro particulate substrates. In one preferred embodiment the nanoparticle coatings are chemically active and function at a high level of efficiency due to the high total surface area of the micro particulate substrate. Also disclosed are coated substrates and compositions having nanoparticles bound to a substrate by the coating compositions.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

AB The present invention relates to topical compositions comprising (a) a transparent component; and (b) a non-interference platelet component having an average particle size of 25 $\mu$  or less, the platelet exhibiting a light transmission value of about 20% to about 70%, and a light reflectance value of about 10% to about 20%. The compositions are useful in providing effective but sheer concealment to skin flaws, without the necessity of using large amounts of metal oxide pigments.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

AB The invention relates to a process for improving the stability with respect to UV radiation of a photosensitive sunscreen agent, comprising the incorporation of said screening agent in a material prepared by the sol-gel route from at least one silicon alkoxide and from at least one surfactant. It is also targeted at a photostable material which comprises the combination of a photosensitive sunscreen agent and of a photostabilizing material prepared by the sol-gel route including at least one silicon alkoxide and at least one nonionic surfactant and at a cosmetic and/or dermatological composition comprising, in a cosmetically and/or dermatologically acceptable vehicle, an effective amount of a photostable material. This cosmetic and/or dermatological composition is intended mainly for protecting the skin and/or keratinous substances against ultraviolet radiation.

COMPLETE THE STN SURVEY - APRIL 27 THROUGH MAY 31

10/639,586

Dear valued STN customer,

In an effort to enhance your experience with STN, we would like to better understand what you find useful. Please take approximately 5 minutes to complete a web survey.

If you provide us with your name, login ID, and e-mail address, you will be entered in a drawing to win a free iPod(R). Your responses will be kept confidential and will help us make future improvements to STN.

Take survey: <http://www.zoomerang.com/survey.zgi?p=WEB2259HNKWTUW>

Thank you in advance for your participation.

AB Self-foaming and/or foam-like cosmetic or dermatological  
preparations which comprise

I. an emulsifier system which consists of

A. at least one emulsifier A chosen from the group of wholly  
neutralized, partially neutralized or unneutralized branched and/or  
unbranched, saturated and/or unsaturated fatty acids having a chain  
length of from 10 to 40 carbon atoms,

B. at least one emulsifier B chosen from the group of polyethoxylated  
fatty acid esters having a chain length of from 10 to 40 carbon atoms  
and a degree of ethoxylation of from 5 to 100 and

C. at least one coemulsifier C chosen from the group of saturated and/or  
unsaturated, branched and/or unbranched fatty alcohols having a chain  
length of from 10 to 40 carbon atoms,

II. up to 30% by weight--based on the total weight of the  
preparation--of a lipid phase,

III. 1 to 90% by volume, based on the total volume of the preparation,  
of at least one gas chosen from the group consisting of air, oxygen,  
nitrogen, helium, argon, nitrous oxide (N.sub.2) and carbon dioxide  
(CO.sub.2)

IV. one or more substances chosen from the group of organic  
hydrocolloids

V. 0.01-10% by weight of one or more particulate hydrophobic and/or  
hydro-phobicized and/or oil-absorbing solid-body substances.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

AB The present invention provides a method of preventing the appearance of fine lines, wrinkles and discoloration on the skin. This is achieved by the topical application to the skin of a composition containing a first platelet of alumina treated with a metal oxide, a second platelet treated with a spherical scattering component, and a **cosmetic** or pharmaceutical carrier. The compositions can also contain a standard interference pigment, such as a white and a yellow interference pigment to further blend the color to closely match the natural skin tone. The combination of pigments and platelets creates a mosaic of color and optically manipulates light such that lines, wrinkles, disfigurations and discolorations on the skin appear to substantially vanish. In addition to the pigments and platelet components, a non-interference pigment can also be added to fine-tune the matching of color to the skin tone. The alumina platelet alone is metallic-looking; however, when it is tempered with the other platelet containing the spherical scattering component, the net effect is that the skin appears natural, luminous and flawless.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

AB The present invention is directed to a composition comprising an antiperspirant salt suspended in a carrier vehicle thickened with a silicone latex. The composition typically comprises about 50 to 90% carrier vehicle, which is advantageously substantially comprised of a volatile silicone, about 3 to 30% antiperspirant salt, which is typically an aluminum chlorohydrate or aluminum-zirconium chlorohydrate, and about 3-25% silicone latex. Preferably the composition will contain an auxiliary thickening agent such as a fumed silica, hydrated silica or trihydroxystearin, typically in an amount of 0.01 to 10%. The composition will preferably have a viscosity of about 12,000 to 20,000,000 cP. The present invention also embraces an apparatus for delivering the above-described composition when formulated with a medium viscosity of about 12,000 to 50,000 cP, said apparatus having a porous dome with a porosity of about 150  $\mu$ m to 400  $\mu$ m through which the composition is delivered.

AB The present invention is a self-foaming, foam-type, post-foaming or  
foamable **cosmetic** or dermatological preparation comprising at  
least one siloxane elastomer selected from the group of siloxane  
elastomers obtainable by reacting vinyl-terminated polymethylsiloxane  
with methylhydro-dimethylsiloxane or by reacting hydroxy-terminated  
dimethylpolysiloxane with trimethylsiloxyl-terminated methylpolysiloxane.  
The present invention also includes a method of preparing foam  
comprising combining the **cosmetic** or dermatological  
preparation with at least one gas or propellant by releasing the  
preparation and the gas or propellant from a pressurized gas container,  
and a method for increasing the stability of a foam comprising adding at  
least one siloxane elastomer.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

AB Self-foaming and/or foam-like **cosmetic** or dermatological preparations which comprise

I. an emulsifier system which consists of

A. at least one emulsifier A chosen from the group of wholly neutralized, partially neutralized or unneutralized branched and/or unbranched, saturated and/or unsaturated fatty acids having a chain length of from 10 to 40 carbon atoms,

B. at least one emulsifier B chosen from the group of polyethoxylated fatty acid esters having a chain length of from 10 to 40 carbon atoms and a degree of ethoxylation of from 5 to 100 and

C. at least one coemulsifier C chosen from the group of saturated and/or unsaturated, branched and/or unbranched fatty alcohols having a chain length of from 10 to 40 carbon atoms,

II. up to 30% by weight--based on the total weight of the preparation--of a lipid phase,

III. 1 to 90% by volume, based on the total volume of the preparation, of at least one gas chosen from the group consisting of air, oxygen, nitrogen, helium, argon, nitrous oxide (N.sub.2O) and carbon dioxide (CO.sub.2)

IV. one or more substances chosen from the group of organic hydrocolloids

V. 0.01-10% by weight of one or more particulate hydrophobic and/or hydrophobicized and/or oil-absorbing solid-body substances.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

AB The present invention provides a method of preventing the appearance of fine lines, wrinkles and discoloration on the skin. This is achieved by the topical application to the skin of a composition containing a first platelet of alumina treated with a metal oxide, a second platelet treated with a spherical scattering component, and a **cosmetic** or pharmaceutical carrier. The compositions can also contain a standard interference pigment, such as a white and a yellow interference pigment to further blend the color to closely match the natural skin tone. The combination of pigments and platelets creates a mosaic of color and optically manipulates light such that lines, wrinkles, disfigurations and discolorations on the skin appear to substantially vanish. In addition to the pigments and platelet components, a non-interference pigment can also be added to fine-tune the matching of color to the skin tone. The alumina platelet alone is metallic-looking; however, when it is tempered with the other platelet containing the spherical scattering component, the net effect is that the skin appears natural, luminous and flawless.

L20 ANSWER 1 OF 1 USPATFULL on STN

TI Natural look **cosmetic** compositions

PI US 6117435 20000912 <--

AB . . . outer layer of silica; (b) at least one interference pigment; and optionally (c) at least one non-interference pigment, in a **cosmetically** or pharmaceutically acceptable vehicle. The compositions of the invention confer a natural appearance to the skin, also reducing the appearance. . .

SUMM The present invention relates to **cosmetic** compositions. More specifically, the invention relates to **cosmetic** compositions which have a natural appearance on the skin.

SUMM . . . say, few individuals can ever hope to meet such a standard without some outside assistance. Thus, a wide variety of **cosmetics** exist to help out where nature has failed.

SUMM . . . development of a natural-looking makeup which, given currently available technology, seem difficult, if not impossible to resolve. Very recently, the **cosmetics** industry has turned to a detailed study of the optics of light absorption, reflection and scattering in the skin in. . . will convey to the viewer the impression of a natural but flawless clean skin (See, for example, Nishikata et al., **Cosmetics** and Toiletries 112: 39-55, 1997). It has, for example, been recognized that the angle of viewing of the skin will. . . has not to date been fully realized. However, the present invention represents a substantial advance in the preparation of a **cosmetic** which conveys the transparency and color of natural skin, while providing considerable masking of surface flaws.

SUMM . . . of silica; (b) at least one interference pigment; and, optionally, (c) at least one non-interference pigment, in combination with a **cosmetically** acceptable vehicle. The compositions can be color **cosmetic** compositions, such as foundations, powders, eyeshadows, blushes, lip products, and the like, as well as treatment products which, when applied, . . .

SUMM . . . dimethicone, silanes, polyethylene, metal soaps, lecithin, waxes, nylon or fluorochemicals. A particularly suitable silica bead is commercially available from US **Cosmetics** under the name SINP-OSD-SW-6(LHC). This bead is approximately 6 $\mu$  in diameter, comprising a silica core (about 85%), a thin layer of. . .

SUMM . . . look that may result from one of the other components, particularly the interference pigment. Such materials are known in the **cosmetic** industry for their light-scattering properties on the

skin. Powders of this type may include, but are not limited to, powders comprising (with examples of commercially available sources) **calcium aluminum borosilicate** (Luxsil.TM.), PMMA (Microsphere M-100), polyethylene (polyethylene C1 2080), methyl methacrylate crosspolymer (Covabeads LH85), nylon-12 (Orgasol 2002 O Nat Cos C), . . .

SUMM . . . concealers, bronzers, eyeshadows, eyeliners, lipsticks, and lipglosses. The products of the invention can take any form which is typical of **cosmetic** products, for example, hot pour formulations, water-in-oil emulsions, oil-in-water emulsions, gels, sticks, sprays, anhydrous formulations, and pressed or loose powders..

SUMM . . . limited to, water soluble colorants (such as FD&C Blue #1); oil soluble colorants (such as D&C Green #6); water soluble **sunscreens** (such as Eusolex 232); oil soluble **sunscreens** (such as octyl methoxycinnamate); particulate **sunscreens** (such as zinc oxide); antioxidants (such as BHT); chelating agents (such as disodium EDTA); emulsion stabilizers (such as carbomer); preservatives.

SUMM The compositions can also encompass one or more active components, and as such can be either **cosmetic** or pharmaceutical compositions. Examples of useful actives include, but are not limited to, those that improve or eradicate age spots, . . . agents, antiperspirants, antipsoriatic agents, antiseborrheic agents, hair conditioners and hair treatment agents, antiaging agents, antiwrinkle agents, antiasthmatic agents and bronchodilators, **sunscreen** agents, antihistamine agents, skin lightening agents, depigmenting agents, wound-healing agents, vitamins, corticosteroids, tanning agents, **sunscreens** or hormones. More specific examples of useful active agents include retinoids such as retinol, and esters, acids, and aldehydes thereof; . . .

CLM What is claimed is:

. . . and an outer layer of silica; (b) at least one interference pigment; and optionally (c) at least one non-interference pigment, in **cosmetically** or pharmaceutically acceptable vehicle.

. . . diameter of between about 1 to 10 microns; (b) a mica interference pigment; and (c) a non-interference pigment; in a **cosmetically** or pharmaceutically acceptable vehicle.
